                      Clone distribution: MGC clone distribution information can be for through the I.M.A.G.B. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 162 Row: f Column: 6
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Direct Submission

EcoRI-NotI cut cDNA was then ligated into the vector. Vector: pBluescript II KS(+); Site_1: EcoRI; Site_2: NotI Host: Escherichia coli DH10B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence is from the

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                        Score

The present invention also describes: (1) the preparation of the OSGPLP protein; (2) applying the OSGPLP protein in diagnosis; (3) the prevention and/or treatment of related diseases; (4) utilising the OSGPLP protein in screening its agonist, excitomotor and inhibitor and preparing an antibody against the OSGPLP protein; and (5) the use of the OSGPLP polymucleotide sequences, proteins, agonists, excitomotors, inhibitors and antibodies in treating diseases related to the abnormal OSGPLP gene and in preparing the medicine composite for the treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    O-sialogycoproteinase-like protein and encoding for diagnosing, preventing and treating related

CC The invention describes an isolated nucleic acid molecule (I) encoding a CC metalloprotease (MP-1). (I) is useful for preventing, treating, or CC ameliorating a medical condition, particularly an immune disorder, an CC aberrant glutamate transport or motor neuron disorder, such as CC anyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like CC condition. The compositions and methods are also useful for diagnosing, CC prognosticating, treating, ameliorating and/or treating disorders (CC associated with MP-1 activity, e.g. diabetes, cancer, reproductive CC disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell CC aplasia), metabolic disorders (e.g. premature puberty, Kallman syndrome, CC or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, CC parkinson's diseases, Huntington's disease or Tourette syndrome), liver CC and renal diseases and immune disorders (e.g. AIDS, rheumatoid arthritis CC fibrosis) and vascular, inflammatory and neurological disorders (e.g. CC fibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease or Parkinson's disease). This sequence represents a CC metalloprotease MP1 polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Alignment

                          Best Local Similarity:
                                                                                                                  The invention relates to an isolated polypeptide comprising: any of 28 CC sequences of 48-1256 amino acids; a natural amino acid sequence at least CC 90% identical to the 28 amino acid sequences, 94% identical to a sequence country of 28 coids, 96% identical to a sequence of 414 amino acids, 96% identical to a sequence of 414 amino coids, or 97% identical to a sequence of 422 amino acids, all given in CC the specification; or a biologically active or immunogenic fragment of the isolated polypeptide. The polypeptides and polymucleotides are useful in diagnosing, treating and preventing diseases or conditions associated with the decreased expression of protein modification and maintenance complete (MDD), such as cell proliferative diseases (e.g. cancer, CC allergies), neurological disorders (e.g. stroke, parkinson's disease, CC epilepsy), gastrointestinal (e.g. ulcer, cirrhosis), reproductive (e.g. circhosis), developmental, vesicle trafficking disorders, and CC infections (e.g. bacterial, viral parasitic, protozoal). These are also CC useful in assessing the effects of exogenous compounds on the expression of cragments are useful in screening compounds for effectiveness as agonist CC arget polymucleotide and compounds that specifically bind to or modulate trafficity by of the polypeptides, or in altering the expression of the activity of the polypeptides. The microarray is useful in monitoring CC measuring protein.protein interactions, drug-target interactions, and CC encoding a human PMOD protein of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; adenosine deaminase; seven transmembrane domain receptor; cancer; 7TM, glycoprotease; immune disorder; IgA deficiency; allergy; arrhythmia; rheumatoid arthritis; diabetes; atherosclerosis; cardiovascular disorder; hypertension; ischaemic heart disease; obesity; myocardial infarction; endothelial cell disorder; Grave's disease; psoriasis; brain disorder; Parkinson's disease; Alzheimer's disease; haematopoietic disorder; cerebral oedema; metabolic disorder; liver disorder; platelet disorder; chromosome mapping; tissue typing; gene therapy; neuroprotective; cytostatic; anorectic; cardiant; haemostatic; gene; ss.
The present invention relates to novel 38650, 28472, 5495, 65507, 81588 or 14354 nucleic acid molecules which encode adenosine deaminane, glycoprotease or seven transmembrane domain (77M) receptor family members. Sequences of the invention are useful in diagnosing and treating cancer or aberrant cellular proliferation and/or differentiation (e.g. colon or lung cancer), immune disorders (e.g. selective IgA deficiency, rheumatoid

arthritis, diabetes, allergy), heart or cardiovascular disorders (e.g., hypertension, atherosclerosis, arrhythmias, ischaemic heart disease, myocardial infarction, thrombus) including endothelial cell disorders (e.g. psoriasis, Grave's disease), haematopoietic disorders, brain disorders (e.g. cerebral oedema, Parkinson's or Alzheimer's disease), pain and metabolic disorders (e.g. obesity), liver disorders or platelet disorders. They are also useful in screening assays, predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenetics) and prophylactic and therapeutic methods. The nucleic acids may also be used in chromosome mapping, tissue typing and forensic biology and as surrogate markers. Sequences of the invention are also used in cene therapy. The present sequences of the invention are

CC deaminase), 28472 (encoding a glycoprotease), 5495 (encoding a 7) CC deaminase), 28472 (encoding a glycoprotease), 5495 (encoding a 7) CC transmembrane receptor), 65507, 81588 or 14354 nucleic acid molecule (or ca sequence which is at least 60% identical to the six nucleic acids or ctheir open reading frames, fragments of at least 15 nucleotides, naturally occurring variants, or a DNA insert of the plasmid deposited continued the American Type Culture Collection as Accession No. not defined in the specification, which encodes the amino acid sequence). Also included care a host cell containing the nucleic acids (used to produce the proteins), the encoded proteins, an antibody that selectively binds to compound that binds to/modulates the cativity of the polypeptide. The nucleic acid molecules, polypeptides and comethods are useful for diagnosing, treating cancer, aberrant cellular compound that binds to/modulates the compound that binds to/modulates the cativity of the polypeptide. The nucleic acid molecules, polypeptides and compound that binds to/modulates the cativity of the polypeptide. The nucleic acid molecules, polypeptides and compound that binds to/modulates the cativity of the polypeptide. The nucleic acid molecules, polypeptides and comethods are useful for disgnosing, treating cancer, aberrant cellular compound that binds to/modulates, polypeptides and compound that binds to/modulates, polypeptides and comethods are useful for disgnosing, treating cancer, aberrant cellular compound that binds to/modulates, polypeptides and compound that binds to/modulates, polypeptides and comethods are useful for disgnosing, treating cancer, aberrant cellular compound that binds to/modulates and compound that binds to/modulates and compound that binds to/modulates the cativity of the polypeptide. The nucleic acid molecules, polypeptides and compound that binds to/modulates and compound that binds to/modulates and compound that binds to/modulates and compound that binds to/modulates and compound that binds to/modu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated 38650, 28472, 5495, 65507, 81588 and 14354 nucleic acid molecules, useful for diagnosing, treating cancer, pain, or immune, heart, endothelial cell, hematopoeitic, blood vessel, brain, metabolic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated 38650 (encoding
